TI Surface-treated modafinil particles
AB The present invention is directed to solid oral dosage forms comprising surface-treated particles comprising modafinil particles and a hydrophilic treating agent, e.g., polyvinylpyrrolidone, polyethylene glycol, a polyol, and celluloses, methods of making the same, and uses thereof. For example, lactose monohydrate, modafinil, and crospovidone were screened and while mixing the pretreated mixture, a 15% polyvinylpyrrolidone solution was added to generate granules of surface-treated modafinil particles. The surface-treated modafinil particles were then dried, milled, and mixed with anhydrous lactose and crospovidone. Finally, colloidal silicon dioxide, sodium stearyl fumarate, and talc were added to the surface-treated mixture to form a blend which was then compressed into tablets.

TI Pharmaceutical formulations of modafinil
AB Comps. of modafinil and methods of treating neurol. related conditions, e.g., attention deficit hyperactivity disorder (ADHD), with the administration of modafinil are provided. Comps. comprising modafinil and one or more excipients such as diluents, disintegrants, binders and lubricants are also described. For example, a tablet formulation contained modafinil 340.0 mg, lactose 68.0 mg, Povidone 23.6 mg, croscarmellose sodium 18.0 mg, water as needed, and magnesium stearate 3.6 mg. Following 2-wk treatment with a single dose of 340 mg modafinil tablet in children diagnosed with ADHD, approx. a 70% improvement from baseline was observed

 TI Disintegrable modafinil solid preparation
 AB The preparation contains an ED of modafinil and medical adjuvant.
 The adjuvant comprises at least one of a disintegrating agent,
 lubricant, or flavoring agent. The disintegrating agent is
 selected from low-substituted hydroxypropyl cellulose, cross-linked
 polyvinylpyrrolidone, cross-linked sodium carboxymethyl starch, or its
 mixture. The acid source is selected from citric acid, tartaric acid, malic
 acid, etc. The base source is selected from sodium bicarbonate, sodium
 carbonate, potassium bicarbonate, potassium carbonate, etc. The bulking
 agent is selected from microcryst. cellulose, starch, pregelatinized
 starch, dicalcium phosphate, lactose, sucrose, sorbitol,
 xylitol, mannite, or the mixture of them. The lubricant contains
 talc powder, magnesium stearate, or the mixture of them.
 The flavoring agent is selected from stevioside, maltitol, aspartame, etc.
 The carrier may be selected from polyethylene glycol,
 polyvinylpyrrolidone, sugar alc. (such as mannite), or the mixture of them,
 and the ratio of basic remedy:carrier is 1:1-1:10.
